Networking Headaches Solved

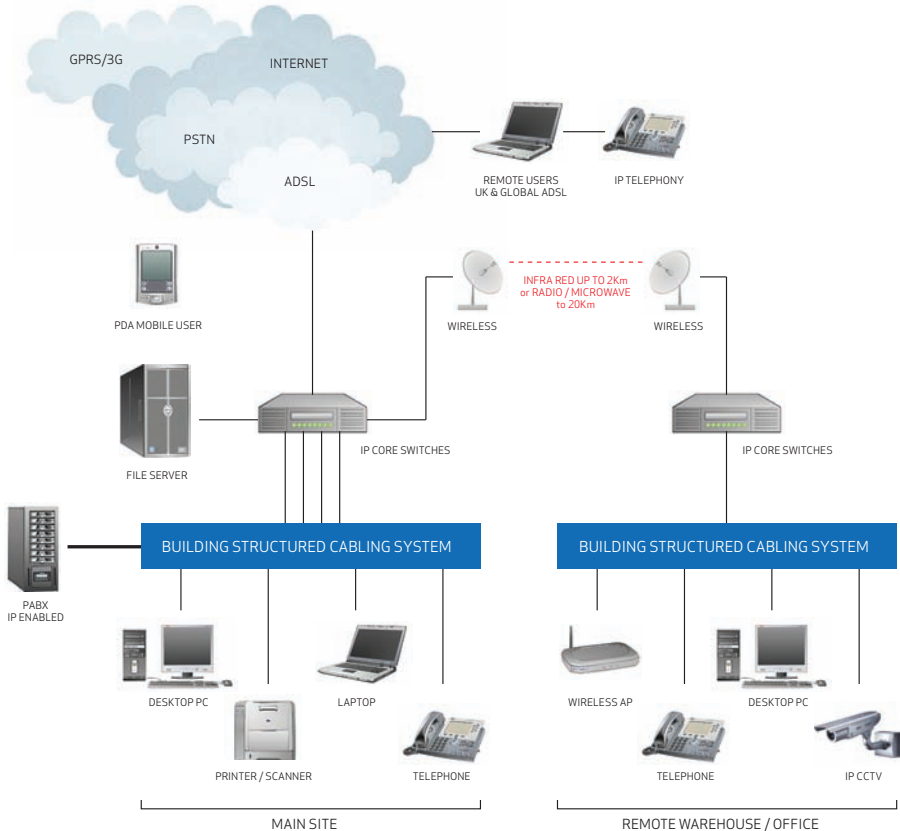

PW Comms design, build and support IP network communications solutions which help clients maximise the effectiveness of their ICT systems.

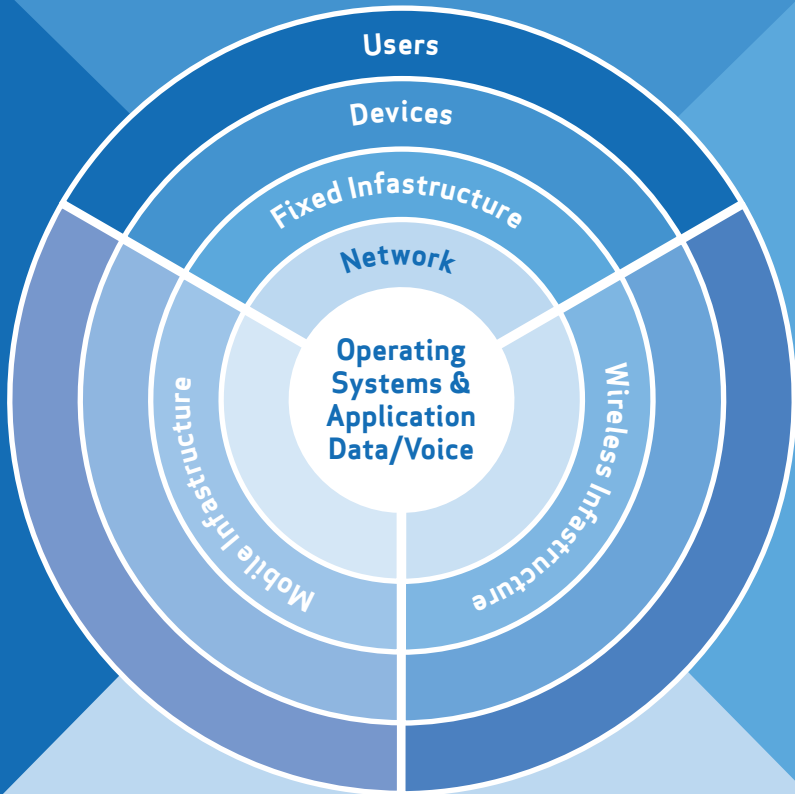

^
The image above shows a typical example of the inherent risk of network failure at the communications cabinet, caused by unstructured growth and patching. Access to the active switches is impossible.

< The image to the left shows the same network cabinet position following redressing and visually documented records that allows for patching and access to active switches. This facilities planned network growth.

The PW Comms Target

Efficiency, Through Connectivity

Network Infrastructure

PW Comms designs, install and commissions structured cabling to provide the physical communications infrastructure for voice, data and video communications (inc CCTV).

Structured cabling consist of a flexible infrastructure with universal outlets designed to support a variety of applications including computer networks, telephones, fax machines and modems. The infrastructure includes cabling to the desktop, cabinets, backbone systems and connectivity items (flyleads and telephone adapters).
